

Benefits

- **Trustmark** your Data to Support Global Data Synchronization and Internal Projects & Processes.
- **Visibility:** Monitor Data Quality and Integrity, and Provide Executive Scorecards that Drive Continuous Improvement.
- **Maximize ROI:** Low-cost and Easy to Implement. Subscription Model for Thousands of Online Validation Rules Saves Time and Money.
- **Collaborate:** Use Clavis as your Data Quality Portal – Across your Organization and Between Trading Partner.
- **Move Quickly:** SaaS Model Means Rapid and Universal Deployment, with no New Infrastructure Required. Expedite Supply Chain Data Quality, Acquisitions and Systems Migration Projects.

On-Demand Data Quality Monitoring for GS1 Communities and Standards

- **Is poor quality trading partner data hampering your efforts to automate the supply chain and improve operational effectiveness?**
- **Do you know if your product data on your own and third party websites or mobile apps is correct and up-to-date?**
- **Does your organization depend on manual workarounds for dealing with low quality product data?**

Substandard Data Quality is a major inhibitor for organizations trying to achieve value-chain visibility and optimization—from efficiency, to safety, to sustainability. Clavis Technology has developed its cloud-based **Data Validation Services** for suppliers, retailers and distributors in the GS1 community to enable them to rapidly and effectively tackle Data Quality issues based on GS1 and related standards.

Clavis Data Validation Services dovetails with **B2B**, **B2C** and **Internal Data Quality** initiatives to deliver immediate business value by bringing visibility to Data Quality problems. The software-as-a-service (SaaS) solution enables organizations to Trustmark their data, and provides a collaboration portal that pinpoints the source of Data Quality problems to deliver sustainable improvement.

- **B2B:**
Outbound/Inbound – Trustmark your data for use before transmitting to trading partners. Quality check data received from trading partners.
- **B2C:**
Monitor the integrity of your data on third-party websites & mobile applications
- **Internal Data Quality:**
Integrate Clavis services within business processes & projects.

Clavis Data Validation Services delivers scorecards and actionable reports to validate consumer products data and highlight Data Quality issues.

Key Features:

Reporting, Scorecards and Collaboration

Monitoring and oversight are essential to ensure data visibility and accountability while maintaining Data Quality improvement over time. Clavis Data Validation Services presents the results of Data Quality tests in an easy to understand dashboard with scorecards that enable organizations to identify where data problems originate. Data Quality scorecards are accessible in any browser and can be shared among Suppliers, Retailers and Distributors, supporting collaboration across the supply chain to fix issues.

On-demand GS1 Data Quality Rules

Thousands of rules for key points in the supply chain:

- GS1 Global Standards
- Weights and Dimensions
- Nutrition and Dietary Information
- Product Descriptions and Classifications
- Regional and Sector-specific GS1 Definitions
- Retailer Requirements for Large Chains
- Powerful "Suspect Data" Rules Based on Business Subject Matter Expertise

Data Validation as a Service

Clavis Data Validation Services is the first cloud-based solution for monitoring and validating your trading partner data against relevant GS1 standards and other relevant Data Quality rules. By leveraging the standard validation services developed by Clavis, Suppliers, Distributors and Retailers save countless man days as they no longer need to specify, build and maintain their own validation rules. The solution is robust and scalable and is available on a subscription pricing model.

Easy to Deploy and Maintain

The software-as-a-service solution is easy to deploy at any point in the end-to-end supply chain. By simply publishing product data to the Clavis GLN via a certified data pool, consumer products companies can access the comprehensive dashboard of Data Quality reports and scorecards. For data that is not in a data pool Clavis accepts a wide range of file types/data feeds via API or XML. Data validation and monitoring services can also be integrated directly with internal supplier and retailer data management systems, forms and processes.

Accelerate GS1 Data Standards Compliance with Clavis

The exchange of high-quality product master data between trading partners is the foundation of business-to-business transactions. But all too often companies don't know exactly how well their data conforms to international standards such as GS1 data definitions. Given the nature and reach of GS1, and the demands of global trade, the GS1 standards cover hundreds of different attributes, regions, verticals, customers and product types. As such, checking that your data conforms to the correct subset of the GS1 standards and retailer-, sector-, or region-specific requirements can be a real challenge.

Clavis Data Validation Services includes thousands of continuously updated ready-to-use validation sets and reports for monitoring your product data. It also includes powerful "suspect data" rules that identify possible errors based on consumer products and data management subject matter expertise. The solution is a web-enabled product, which means any Supplier, Retailer or Distributor with Internet access can use our scorecards and actionable reports to validate their data, highlight issues and benefit from higher quality data.

Go to the Clavis website to sign up for a free Data Visibility Trial to get access to a comprehensive dashboard of Data Quality reports and scorecards that will measure the quality of your data against Global GS1 standards and select Suspect Data Rules.
